

POLY-K⁺

4-10-10-1(S)-.25(Zn)

Reduced tillage frequently means that corn is planted in cooler, wetter, tighter soils. Early season nutrient availability can be critical under these conditions. *POLY-K⁺* is a balanced, clear liquid starter that provides the Potassium and micronutrients necessary to overcome early season stress.

Ultimate Reduced Tillage Fluid Starter

- Made from clear green 10-34-0
(Derived from low-magnesium superphosphoric acid)
- Poly:Ortho content of finished analysis approximately 40% Poly, 60% Ortho, depending on time in storage.
- Potassium containing potassium chloride
- One-third of N is ammonium; balance is urea from UAN solution
- Sulfur to insure early season S availability
- Zinc to enhance phosphorus availability
- Trouble-free clear liquid for easy handling

Density: 10.35 lb. per gallon

Application Rate: 15-20 gallons/acre

Appearance: Clear, green solution

Not for use in-furrow. 2 x 2 placement recommended.
